

INCREASED HORSEPOWER

For 2016 Sierra is introducing a complete line of HP cylinder heads. These cast-iron cylinder heads are designed as direct bolt-on replacements, but with the added advantage of a 25-30 Horsepower increase while utilizing all the existing engine components. Available for all popular GM small block and big-block applications.

STOCK REPLACEMENT CYLINDER HEADS

Dealers no longer have to spend valuable time or resources to rebuild old, worn out engine cylinder head assemblies. They can replace their old or damaged cylinder heads with Sierra's complete lineup of stock-replacement cylinder heads. All cylinder heads have the following features:

- All new high-grade cast iron castings with thicker deck surface, results in greater overall strength and resistance to warping or cracking.
- Hardened exhaust seats for compatibility with all fuel types and ethanol levels.
- Machined deck surfaces to promote proper head gasket sealing.
- Three angle valve finish for superior air and exhaust flow.
- Hand assembled for exacting fit and finish.
- Assemblies utilize exact OE components for proper operation for the engine style and types they are designed to replace. Including:
 - Valve springs for proper valve pressure both open and close
 - Positive seals to eliminate any oil consumption in the valve guides
 - Retainers and locks for proper valve spring seating and retention
- Available for all popular GM 4cyl, V-6 and V-8 applications.
