## SUZUKI BOLT PATTERN Template not matching Jackplate bolt pattern

### NOTICE

SeaStar Solutions has recently been made aware that Suzuki Japan have supplied transom bolt pattern templates that do not match standard engine mount patterns. These templates use a midsection hole that is lower than a standard transom bolt pattern template.

If you find that your bolt pattern template does not match your Jackplate bolt pattern please contact your Suzuki dealer and have them supply you with a standard bolt pattern template before proceeding.
